

Survey Summary

- 44 respondents - 39 attended the event (89%), while 5 did not
- 80% of those who completed the survey learned something new about ACEs at the event.
- 80% of those who completed the survey learned something new about Resiliency at the event.
- 64% (27 of the 44 respondents) learned something new about Trauma Informed Care

I believe a tri-county effort to increase resiliency in our communities is a good idea

Value	Percent	Responses
Yes	97.7%	42
No	2.3%	1
		Total: 43

98% stated they would like to help build awareness in our community, specifically they would like to see things like....

- Include missing organizations (Foster Families Organization, FAN Advocates, School Counsellors, Kids Center therapists and CASA of Central Oregon)
- Increased involvement from County Public /Behavioral Health
- Focus on ACTION instead of Awareness. More focus on what the TRACEs workgroups (aka CATs) are working on or ideas currently considering.
- Build general community knowledge/awareness
- Training – TIO Community Training, Teacher Training, Resiliency Training, Speakers bureau for community & organization trainings
- PR Community Awareness Campaign
- Coordinated efforts of agencies

Of the 32 responding, 94% stated that “In order for it to be worth my time, I’d like it to provide tools, resources and training for my **clients**”. Specifically.....

- Caregiver training
- Parent workshops with guest speakers
- Training for small children on things like mindfulness
- Resource Website with service providers & basic explanations & links to more specific explanations, strategies, etc.
- Electronic brochures/flyers with simple overview to share with others (enhanced version of NI resource guide)
- Workshops/Conferences
- Common Language/common prioritized goal(s)

Of the 31 who responded, 90% would like it to "provide tools, resources and training for providers in **my organization**". Specifically....

- Train the trainer
- Staff Training curricula or guest speakers (i.e. Laura Vandernoot Lipsky around Trauma Stewardship)
- Collaborative problem solving trainings, aces trainings
- Initiate the conversation
- Organizational change to move toward trauma-informed cultures.
- Integrate resilience training into existing behavioral processes
- New avenues for marketing the need for adults who will care and walk alongside our hurting kids.
- Tool box for individuals, managers and executives

Of the 34 who responded, 94% would like it to "provide tools, resources and training for people throughout our **community**." Specifically.....

- Raised community awareness regarding childhood trauma / risk factors and the life long affects of trauma.
- Resources that make programs/services/policy change accessible to those who need it and will benefit from it the most.
- More classes, presentations, support groups
- Involvement from Public Health Officer
- As I've said before, in an ideal world, we would be able to provide a list of what "role" each person in the community can play to help address TRACEs. This will look different depending upon whether the person is a service provider, parent, teacher, administrator, business owner, concerned citizen, etc.

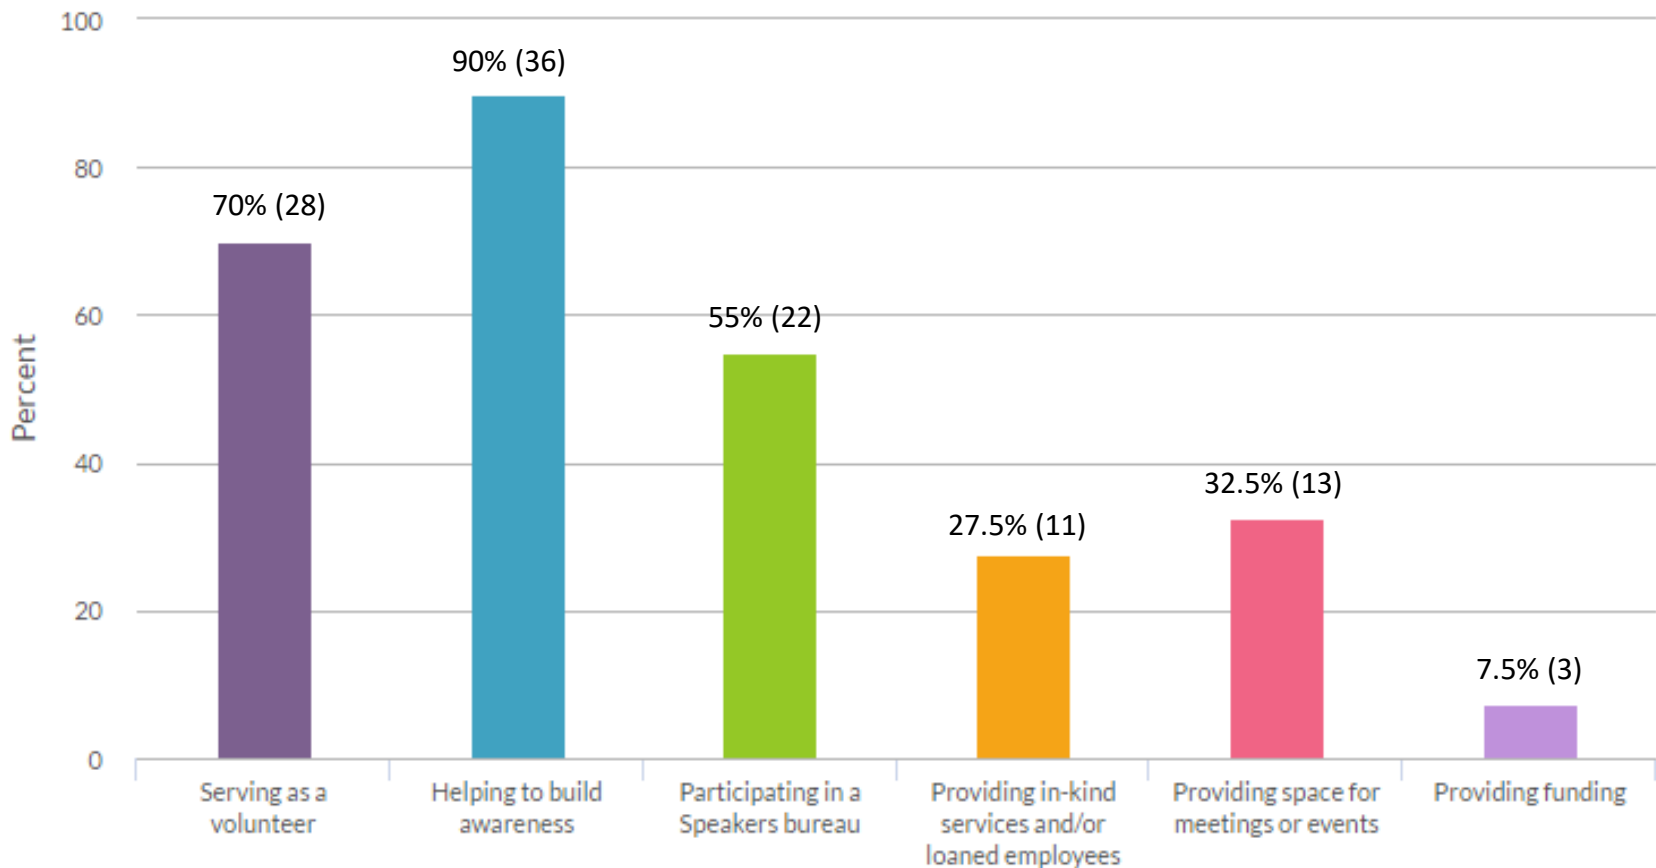

Of the 37 who responded, 92% would like it to "help strengthen the connections between my organization and other organizations that work with my clients". Specifically....

- Presentations at other organizations staff meetings with shared clients
- Sanctuary Model
- Networking events
- Database of organizations who provide assistance
- Resource Fairs
- Coordination of resources; centralized points of care
- community conversations that identify this as a common value are critical for continued support.
- true partnership between agencies is needed, not just the friendly community collaboration that Central OR is known for.
- A way for me to interact with other organizations supporting my clients.

Of the 33 who responded, 85% would like it to "help my organization with measuring resiliency and understanding the strength of our impact." Specifically.....

- Training on how to measure resiliency
- Strong best practice measurements of resiliency would be a great way to start
- create or adopt a tool that measures ACES and resiliency for our clients.
- Instruments/Inventories to measure and collect data.
- Metrics that demonstrate that resources allocated for support are actually working
- expert consulting, data analysis, help with figuring out how to measure our impact quickly, effectively, and in a way that allows us to learn.
- Better more comprehensive measurement and intervention tool kit

I would be interested in contributing to build the movement by...

Other Comments:

- Networking TRACeS Initiative strategies and opportunities through Early Childhood provider groups across the region
- If what I say above resonates with you at all, please let me know how I can help - from brainstorming on ideas, research of what is happening in other communities, developing or reviewing handouts and presentations, developing lists, etc.

What's in a name?

- BRIC - Building Resiliency in Children
- BEYOND TRACES...Thriving through TRACES...
- Trauma and Resiliency Training for the ACE'S Population (The TRACES acronym does not flag ACE's, trauma, or Resiliency)
- Not sure of a name but making sure it is "Resiliency" focused so it has a positive connotation.
- Trauma Resilience Initiative of Central Oregon or TRI-CO (because its tri-county?) TRACES is pretty good, though.
- I think TRACES is fine.
- I like it
- The name is fine.
